

## corporate overview

Incandescent Technologies, Inc. is a systems integration consultancy specializing in the delivery of high value, high capacity information solutions. We help organizations turn disparate, unstructured corporate data into manageable and actionable business information. We provide data integration strategies that are key to uncovering information that was previously unavailable or unidentified in existing systems. These strategies are deployed using our Enterprise Project Methodology (EPM) that ensures high quality at a predictable investment.

Incandescent has grown its market presence by meeting and exceeding client expectations in the financial services, retail, and telecommunications industries. Our presence has continued to grow through industry word of mouth and client references. The satisfaction of our customers with the value of our work has been, and will continue to be, the lifeblood of our firm. We have built our reputation by bringing world-class talent and world-class customer service to each engagement.

Incandescent has been able to help turn struggling data environments into valuable information environments for business users, business modelers and executives alike. Our dedication to successful knowledge transfer to our client's IT team provides on-going productivity and value of our services. We focus on designing, developing, and delivering industrial strength information applications that provide a solid foundation for evolution with the demands of the business.

Incandescent offers a comprehensive set of services and solutions, allowing us to tailor our activities and deliverables to your organizations specific needs. Our services provide protection of your investment in technology through a co-operative approach with your business and information technology professionals.
